

HOUSING DENSITY

2000 CENSUS DATA DEPICTED BY CENSUS BLOCKGROUP

ANCHORAGE COMMUNITY INDICATORS

A PUBLICATION OF THE UAA JUSTICE CENTER

MAY 2009

SERIES 4, NO. 3

Housing Density is simply a measure of the number of housing units per square mile.

HOUSING DENSITY

Housing Density is a measure of land use which indicates how many residences are located within a given geographic area. By comparing the Housing Density to the Population Density, the relative level of overcrowding in an area can be determined. The block group values for housing density are the number of residences in a block group divided by the number of square miles in the block group. The higher the housing density, the greater the number of residences per square mile. The housing density scores presented below range from .448 to 10,105.311 residences per square mile (sparse to dense) and are distributed with a mean of

2,157.73 and a standard deviation of 1,701.79. Refer to the appendix for more information regarding this variable.
