

POPULATION DENSITY

2000 CENSUS DATA DEPICTED BY CENSUS BLOCKGROUP

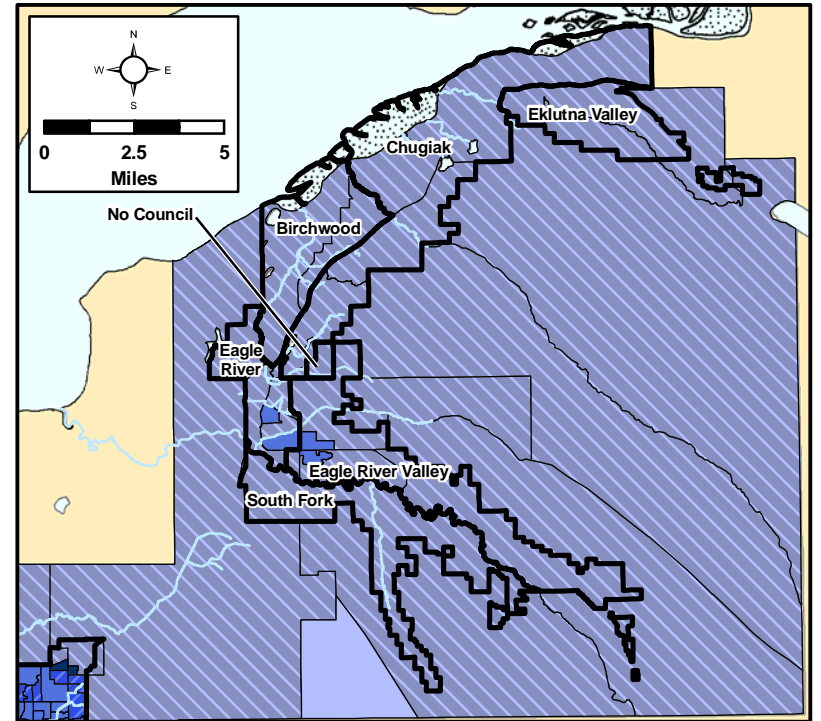

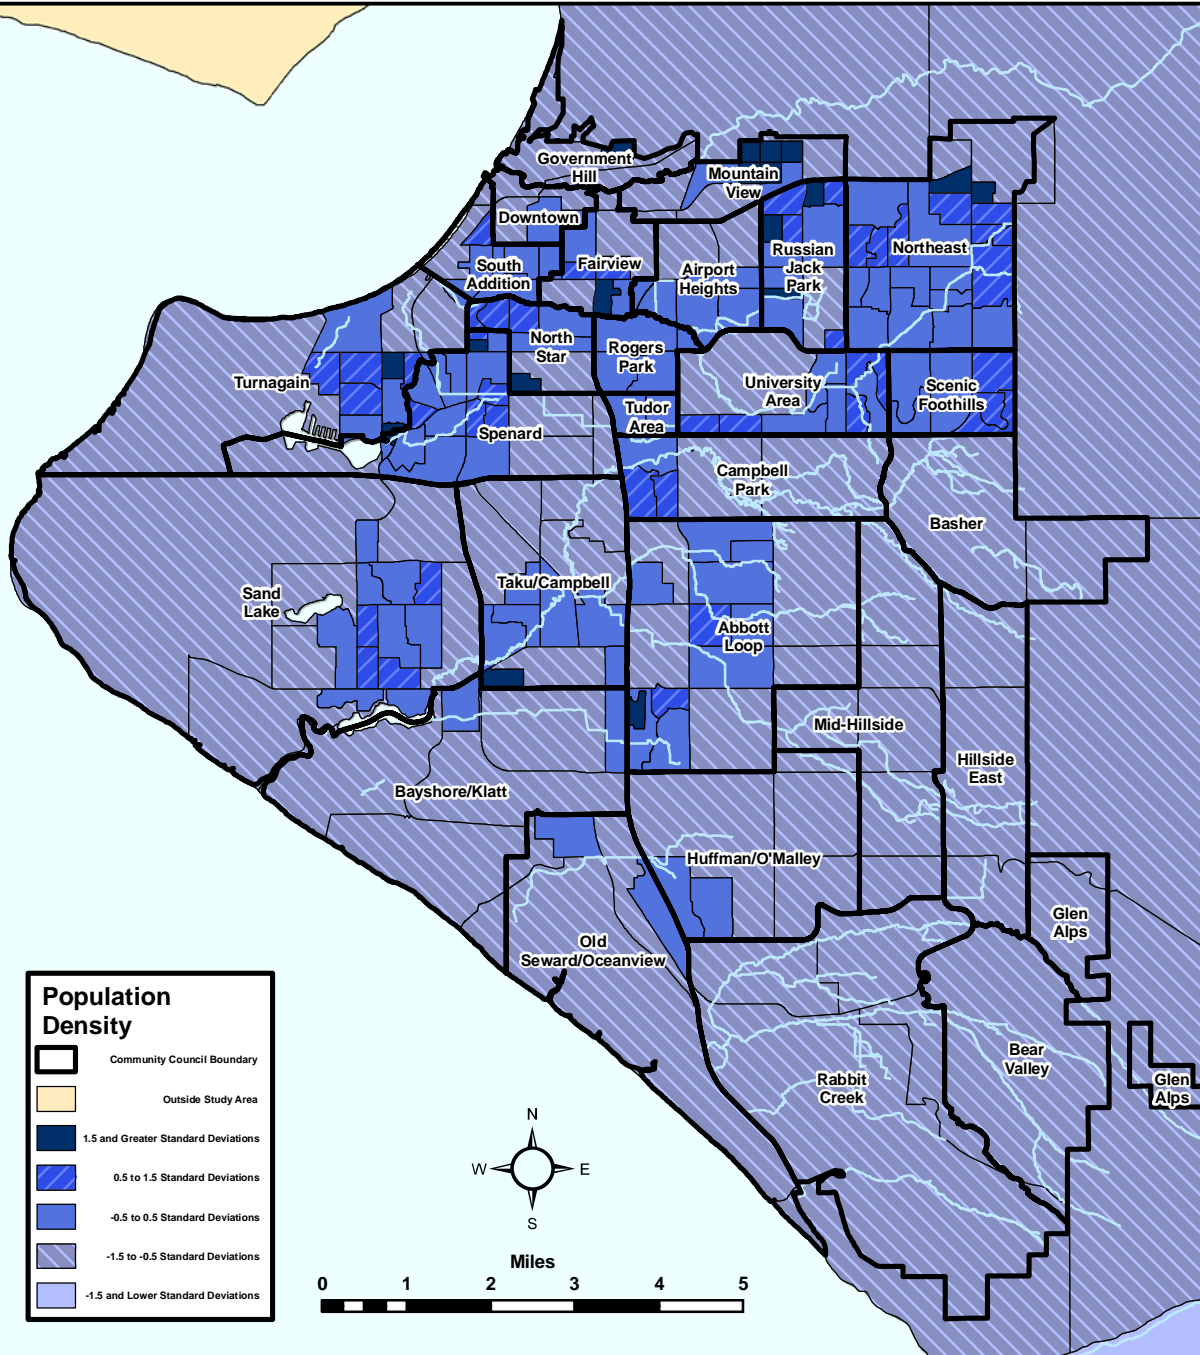

ANCHORAGE COMMUNITY INDICATORS

A PUBLICATION OF THE UAA JUSTICE CENTER

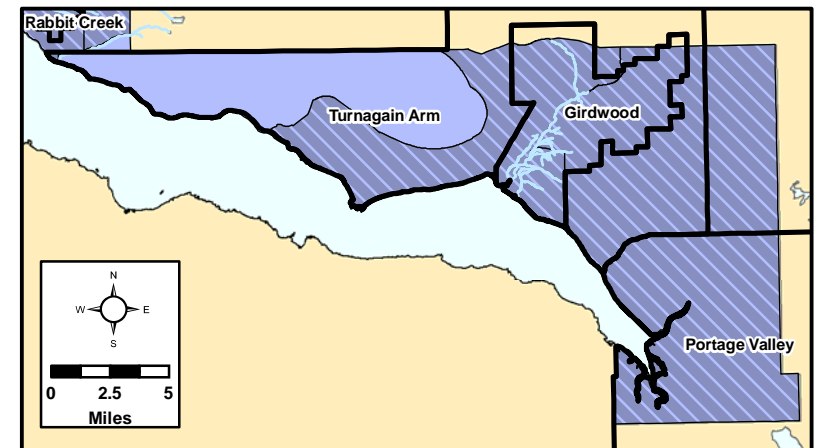

MAY 2009

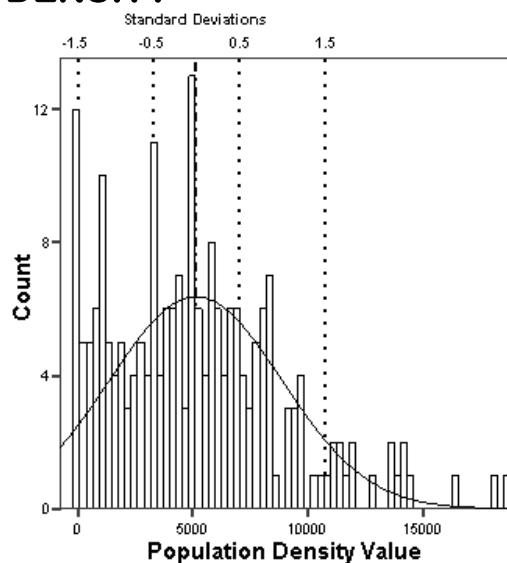

SERIES 4, NO. 9

Population Density is the number of persons per square mile.

POPULATION DENSITY

Population Density is a measure of relative neighborhood density—that is, how many people there are in a given area. This is considered an important antecedent in the determination of collective efficacy for children (Sampson, Morenoff, & Raudenbush 1999). As population density increases, so does relative anonymity in a community and the difficulty of maintaining and enforcing informal social controls. Research has uncovered associations between population density and fertility (Lutz, Testa, & Penn 2006; Vanlandingham & Hirschman 2001), mental and physical health (Reid 2002; Wood, Chan, Montaner,

Schechter, Tyndall, O'Shaughnessy, & Hogg 2000; Oliver 2003), suicide (Hempstead 2006; Kennedy, Iveson, & Hill 1999), violent crime and victimization (Green, Strolovich, Wong, & Bailey 2001; Kennedy, Iveson, & Hill 1999; Melde 2006), and engagement among the elderly (Porell & Miltiades 2002).

Population Density is the total number of persons in a block group divided by the square mileage of the block group. The data listed in the following tables were computed from data collected in the 2000 census.

The mean Population Density score was 5,142.59, and the standard deviation was 3,730.57.

For more information regarding this variable, please refer to the appendix of this document.
