

RACIAL HETEROGENEITY

2000 CENSUS DATA DEPICTED BY CENSUS BLOCKGROUP

ANCHORAGE COMMUNITY INDICATORS

A PUBLICATION OF THE UAA JUSTICE CENTER

MAY 2009

SERIES 4, NO. 10

Racial Heterogeneity is a measure of the racial diversity in an area. The measure captures the degree to which individuals in the community self-associate with varied racial groups and the degree to which those individuals are evenly spread across racial categories.

RACIAL HETEROGENEITY

Racial Heterogeneity is a measure of the racial diversity in a blockgroup. This variable captures the degree to which individuals in a community associated themselves with various racial groups, and the degree to which those individuals were evenly spread across racial categories. Researchers have linked community racial heterogeneity to crime (Shaw & McKay 1972; Walsh & Taylor 2007; Warner & Pierce 1993), juvenile delinquency (Haynie & Payne 2006), support for social issues (Branton & Jones 2005) and health outcomes (Reidpath 2003).

This measure might vary from 0, when all residents of a blockgroup were of the same race, to .857, when the population was evenly distributed across 6 different racial categories, including “White”, “Black or African American”, “American Indian or Alaska Native”, “Asian, Hawaiian or Pacific Islander”, and “Other”. The data listed in the following tables were computed from data collected in the 2000 census.

The mean Racial Heterogeneity score was 0.445, and the standard deviation was 0.188.

For more information regarding this variable, please refer to the appendix of this document.
