

RESIDENTIAL STABILITY

2000 CENSUS DATA DEPICTED BY CENSUS BLOCKGROUP

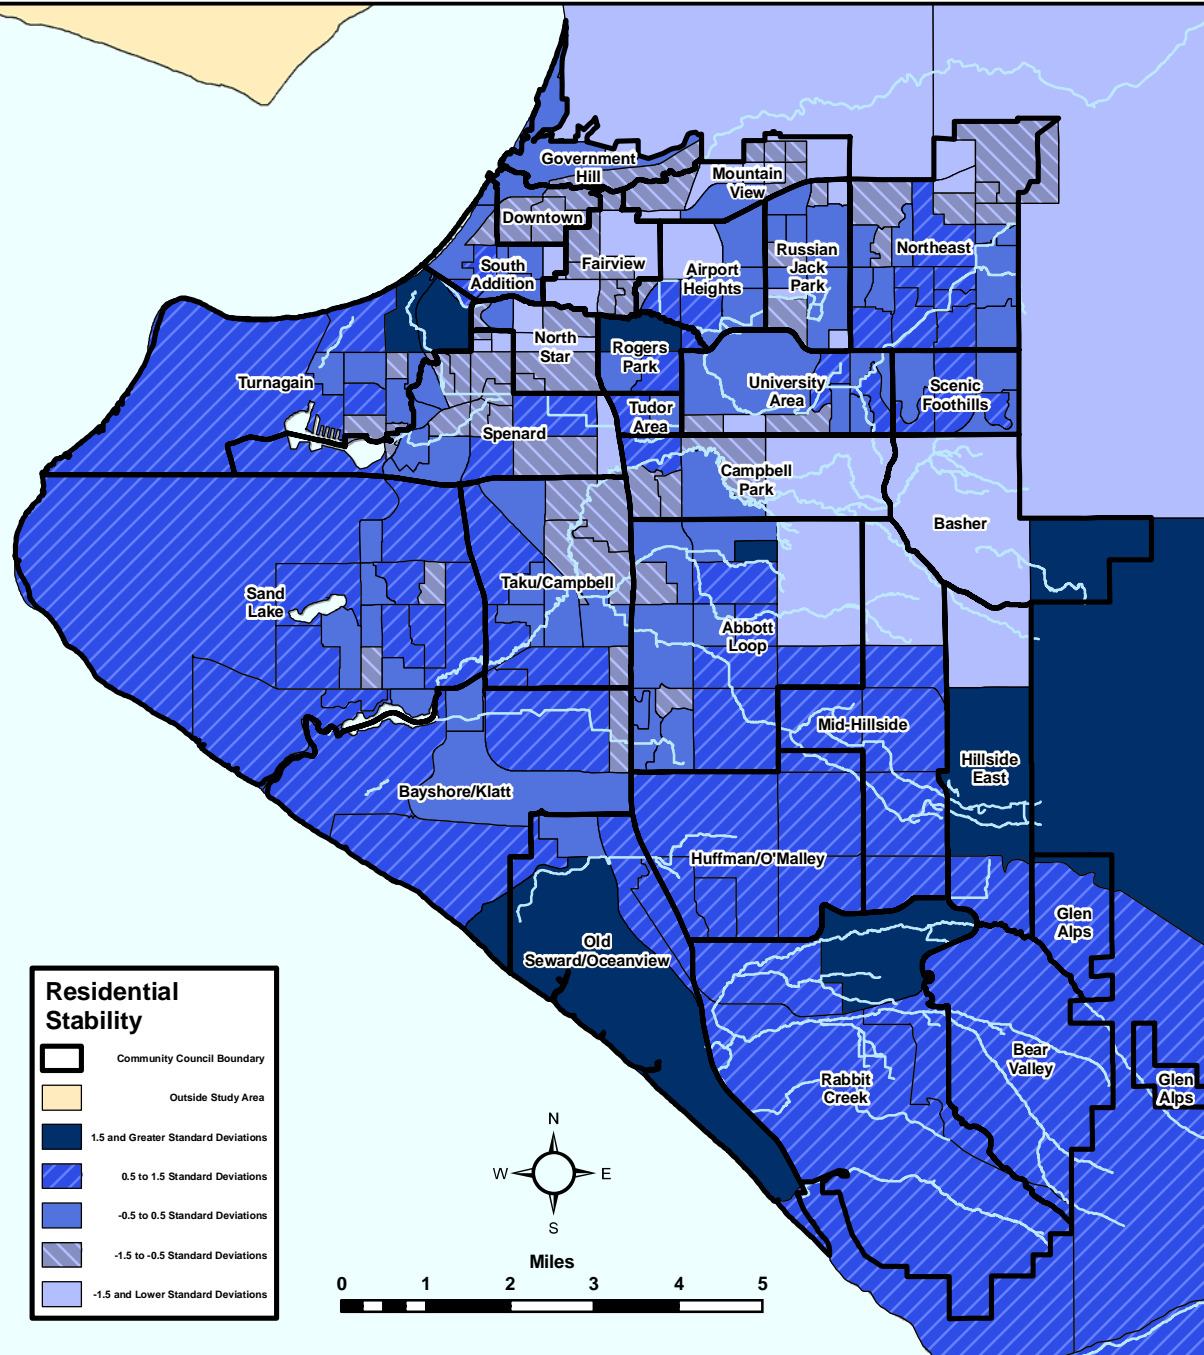

ANCHORAGE COMMUNITY INDICATORS

A PUBLICATION OF THE UAA JUSTICE CENTER

MAY 2009

SERIES 4, NO. 12

Residential Stability is an aggregate measure composed of the proportion of the population that has lived in the same house for the last 5 years, and the proportion of owner-occupied houses. This measure is an indicator of the degree to which neighborhoods are stable. There is reason to believe that residential stability promotes common values and informal control.

RESIDENTIAL STABILITY

Residential Stability is considered an integral factor in the evolution of common values and informal control in a community (Patillo 1998; Sampson, Morenoff, & Earls 1999). Research has also linked residential stability to child poverty (Ferriss 2006), perceptions of neighbor support (Schieman 2005; Shaw 2005), health outcomes (Boardman 2004; Cagney, Browning, & Wen 2005), patterns of sexual activity (Browning & Olinger-Wilbon 2003; South, Lutz, & Baumer 2005), and parenting behaviors (Green 2004; Pinderhughes, Nix, Foster, & Jones 2001).

In prior studies, Robert Sampson and his colleagues used two factor scores, specifically the proportion of residents five years and older living in the same residence for five years, and the proportion of housing units that were owner occupied, to establish residential stability. Since these factor scores did not materialize in the Anchorage data, the simple sum of two values was substituted as a proxy. The sum of proportion of owner occupied houses, and the proportion in the same house for the last 5 years. This index could theoretically range from 0; if there were no owner occupied houses and no one lived in the same house for the last 5 years, to 2; if all houses were owner-occupied and all residents had resided in the same house for the last 5 years.

The data listed in the following tables were computed from data collected in the 2000 census.

The mean Residential Stability score was 0.979, and the standard deviation was 0.395.
